User Help Video Analysis Rubric

Link for Analyzed Video: https://www.youtube.com/watch?v=m0wl61ahfLc

Please watch your video carefully and complete the following rubric based on the Van der Mejj article from this week's module. The rubric is based off of the subcategories found in Figure 1 on page 7. See the article for more description of each criteria.

Guideline	Your rating for each guideline			
	Excellent	**Good**	**Poor**	**N/A**
Instructional video is less than six minutes.			✔	
Video title describes the user's goal.		✔		
Video title includes software name and version.		✔		
Video previews the task with illustrations of the start and end state.			✔	
Narration mainly uses spoken words	✔			
Narration occasionally uses written words in the form of labels.			✔	
Narration uses natural-sounding voice		✔		
The tutorial mainly provides procedural information (how to complete the task).	✔			
The tutorial occasionally provides conceptual information about the underlying rationale.		✔		
The tutorial provides goal information.		✔		
The tutorial occasionally presents information about prerequisites.			✔	

Guideline	Excellent	Good	Poor	N/A
The tutorial presents information about actions and reactions.		✔		
Video occasionally presents information about unwanted states.			✔	
Narration uses a conversational style.		✔		
Narration describes action sequence chronologically.	✔			
Video triggers action with menu-based options instead of keyboard shortcuts.		✔		
Video uses visual highlights to guide user's attention.			✔	
Narration varies according to task complexity.			✔	
If the video is long, it is split into meaningful segments.			✔	
Video includes deliberate pauses after segments.			✔	
Video visually demarcates segments on video timeline.		✔		
Video shows the narrator during explanation only.		✔		
Video provides a concise summary of the main steps in task execution.		✔		
Video provides links to practice files and highlights these files in the video narration and video description.		✔		

Guideline	Excellent	Good	Poor	N/A
Video enables practice immediately after the task video.				
Includes background music that fits the content of the video.				

Analysis Questions

Please answer the following questions. Reference specifics from both the Van der Mejj article and the video to support your analysis.

1. Which guidelines does this video follow most effectively?

This video most effectively follows the guideline that tutorials should primarily provide procedural information. It clearly demonstrates how to create and adjust a Pivot Table step-by-step in chronological order. The narration mainly uses spoken words and maintains a conversational tone, which aligns with Van der Meij's recommendation to use natural, spoken explanation. The video also shows actions and system reactions clearly, allowing viewers to see exactly what happens after each step. Overall, the procedural focus is its strongest feature.

2. Which guidelines could this video follow more effectively?

It does not preview the final result before starting, which makes the overall goal less clear. It also exceeds six minutes and is not segmented into meaningful sections with pauses or visual markers other than the youtube chapters on the playback bar. The lack of visual highlights and signaling also increases cognitive load. These missing elements limit the video's instructional design quality.

3. Overall, how effective is this user help video tutorial?

Overall, I think this video is effective for what it is intended to do. It clearly walks the viewer through the task and many users in the comments mention that it helped them professionally. However, from a design perspective based on Van der Meij's guidelines, it could be structured more intentionally to improve clarity and learning retention.
